

NOTES:

- To use 128k SRAM, cut jumper trace 1-2, place jumper on 2-3
- With all CMOS components, power requirement (from USB) is about 250 mW
- Replace IDE-CF with IDE-SD converter. Has been shown to work with one Sintechi 1309 AK based board, YMMU.
- Only Clock NANDs need to be HTC (74HCT00), however not all other 74 series chips were tested in LS variety. Again YMMU.
